General View of Interlocking "Spanish" Tile.

18656

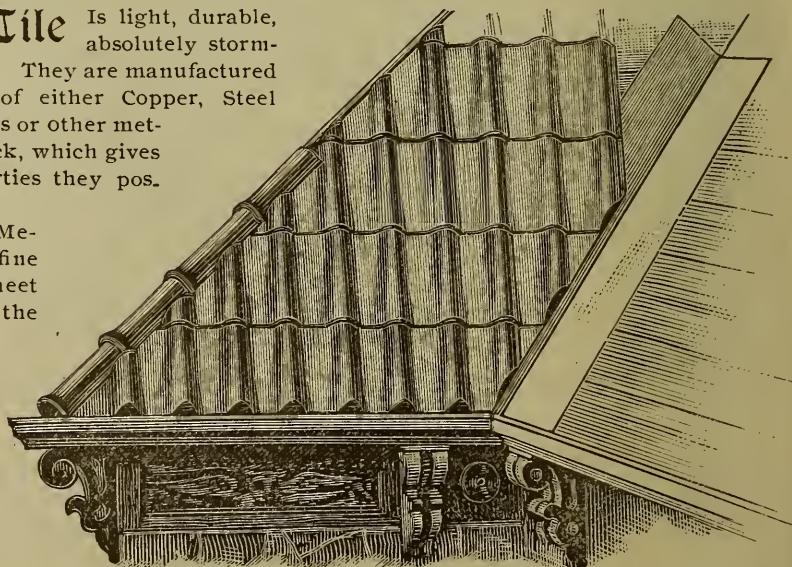

Our "Spanish" Tile is made of Sheet Metal and is Superior to the Terra Cotta Tile,

Possessing its characteristic form and artistic beauty, but having none of its disadvantages.

Our Metallic Tile Is light, durable,
absolutely storm-proof, and easily adjusted. They are manufactured by us, (under Patent) of either Copper, Steel (galvanized), Terne Plates or other metals with a vertical side lock, which gives them the valuable properties they possess for roofing purposes.

It is safe to say that our Metallic Tile made from our fine grade of Cold Rolled Sheet Copper, will not only make the handsomest and most artistic of roofs, but absolutely the best roof known.

OVER ONE MILLION
SQUARE FEET
...NOW IN USE...

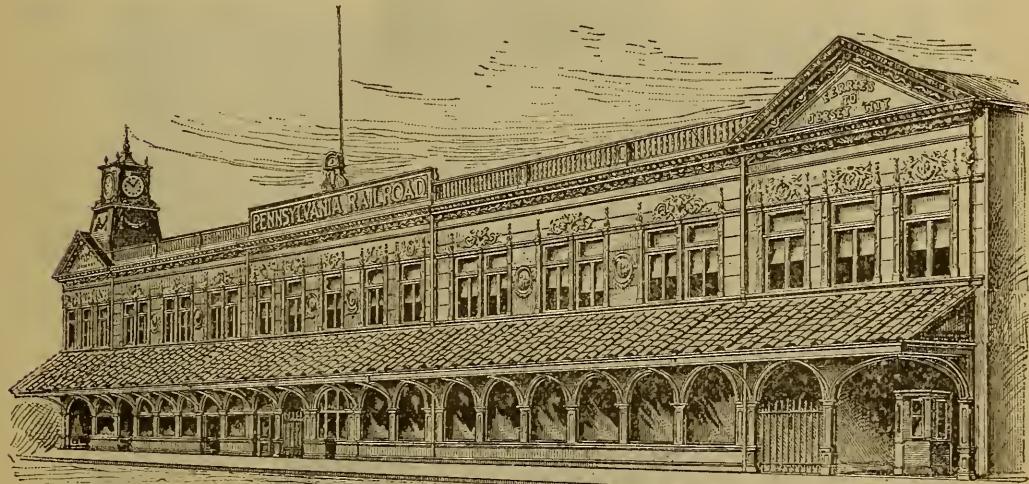

Section showing application of Valley Tiles.

99-384

There are 174 tiles in one square (100 square feet), and the weight per square—say of 16 oz. copper, is not over 200 lbs. for 10x14 size; whereas a square of the Terra Cotta tile weighs from 750 to 800 lbs.

Owing to fluctuations of market on Sheet Copper, special prices on Copper Tiles named on application

PENNSYLVANIA R. R. STATION, 23D ST., NEW YORK, WHERE OUR COPPER TILES ARE IN USE.

We are prepared to furnish with Spanish Tiles all necessary Ridge Cresting, Hips, Eave "Starters", etc., which will give a roof a neat finish and to suit all circumstances.

We will name special prices for "Spanish" Tiles, made of our **HIGH GRADE ROOFING PLATES**, on application.

These tiles are securely packed in boxes, and when made of Tin, our price includes painting both sides.

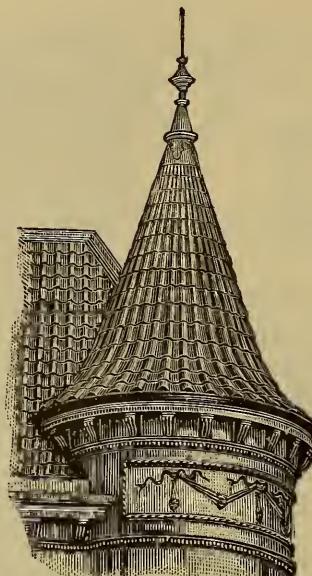

One-half more roof timber is required for a structure where clay tiles are used than for copper. This is an important item for consideration in the cost of a building.

The BEST is always the CHEAPEST.

**Merchant's
Graduated
Tiles**

(Spanish Pattern)

Saves 50 per cent. in material, and more in labor of laying. Does not involve waste by trimming in putting on.

Patented January 3, 1894.

for
Circular Roofs,
Domes
and
Bell-Shaped Towers,
Turrets
and all
Conical Surfaces

The only Metal Tile
made for this class
of work

There are few buildings being erected that do not have one or more towers upon them and no feature of the *modern* building adds more to its architectural beauty than a graceful and well-proportioned tower. Yet in their construction a difficult problem has invariably arisen as to a suitable covering—especially for *conical towers*, for which there has been nothing in the market adaptable, the only available covering being wood shingles, which split when drawn to the convex form of a tower. State from the same cause will break and metal shingles of forms designed for straight roofing involve a waste of just fifty per cent. of materials in fitting to cones, and greater waste of time in putting on, as after the first course each succeeding one has to be reduced in size, and practically made over by the roofer.

The manufacturing is now
done at the factory, and
not by the roofer on the
roof.

Locks

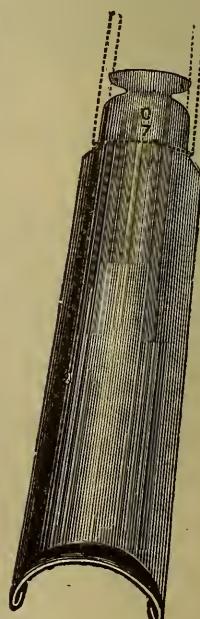

It will be noticed that in both our Graduated and Regular "Spanish" Tile, the locks are so constructed that the water cannot enter them, but is carried *from* instead of *to* the lock. In this feature they differ, and are superior to all others.

No. 2.
Graduated Flat Tile, with
but one edge turned.

No. 3.
Graduated Flat Tile, with
both edges turned ready
for nailing between wood
strips; also section of
adjoining course.

No. 4.
Graduated Round Tile,
for covering wood
strips, dotted line indi-
cating next tile above.

“TEN IN ONE.”

Merchant's Metal Spanish Tiles.

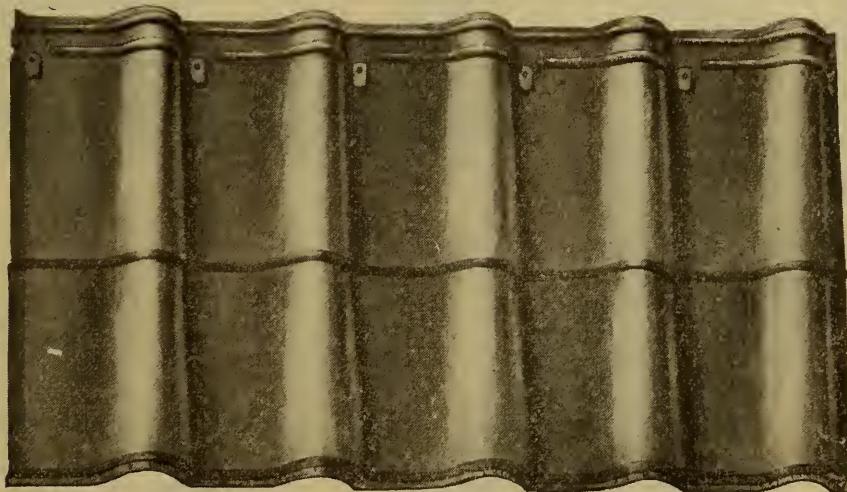

One Sheet Stamped into Ten Tiles.

Copper

Terne Plates

Galvanized Steel

Zinc

It is a well known fact that we were the originators of Metal “Spanish” Tiles with *storm proof lock*, the excellence of which is proven by the large quantities supplied during the past years.

We hold letters patent on the *only storm-proof lock* which has been found effective, formed in the curved part of the tile, which turns the water from the lock. This limits *imitators* to a lock in the *flat portion of the tile*, where it would naturally be *flooded* in every rain storm and leakage is inevitable. The system of treatment as in corrugated iron with side over-lap, such as our “Ten in One,” is superior to a flat lock. While we do not consider the light sheets will make as tight a roof as our *Interlocking Tiles*, at the same time we manufacture them for those who prefer this pattern, which shows ten figures in each sheet. The upper end of the underlying Tile has securely riveted thereto heavy cleats, which secures the lower edge of the Tile above, which being independent of nails, makes a most valuable feature in this class of Tile.

*Ridge

for Small Roofs, Mansards, Bulkheads, Gables, Etc.

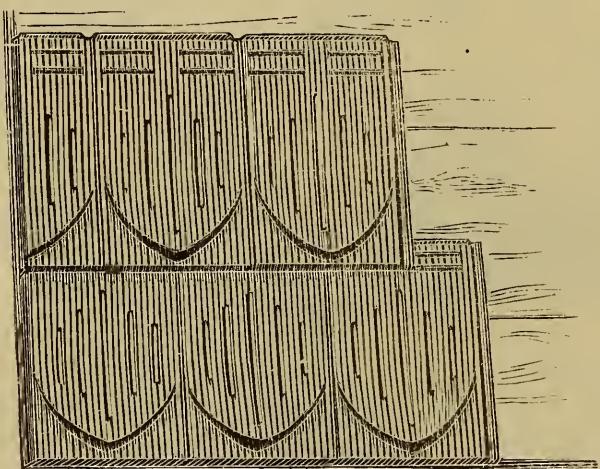

In ordering, if you will give us the length of eave or base course we will cut the right amount for first course. The points cut off will work along the top. No extra charge.

MERCHANT'S

"Gothic" Shingle

is designed expressly to meet a requirement amongst Architects, Builders, and others who have discarded the *ordinary* Tin Shingles

on account of the absence of ornamentation and bold appearance, such as we have endeavored to make prominent in

**This
... Shingle ...**

avoiding the monotony of flat Shingles or Slates

AN IMPORTANT FEATURE

in our new "Gothic" Shingle aside from the storm-proof lock, is that the sheets are first *crimped*, giving the Shingles strength and rigidity, as well as the ornamentation possessed by no other Shingle on the market.

WE HAVE THREE SIZES

viz: 7 x 10", 10 x 14" and 14 x 20", manufactured of Copper and Tin (Roofing Plates) of various grades; also of Galvanized Steel.

The "Gothic" Shingle is easily laid, and the construction of the side-lock is such that every allowance is made for expansion and contraction of the metal, and is absolutely storm-proof.

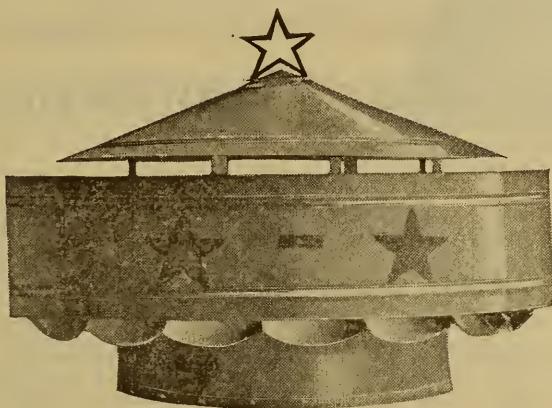

... NO NAILS EXPOSED AND NO SOLDER USED ...

A thoroughly practical, and economic system of Roofing.

Prices Named on Application.

THE "STAR" ★ VENTILATOR

Has an efficiency that is well known to Architects, Engineers, prominent Builders and others throughout the country. It is used also by the United States Government, in the various engineering departments, on account of its superiority.

PATENTED MARCH 30, 1886

Made of either Galvanized Iron, Copper or Brass in all sizes to suit all conditions and to meet every requirement.

8 "	50 "	48 "	1809 "
9 "	63 "	60 "	2827 "

The "Star" Ventilator, owing to its construction, has a greater exhaust or ventilating area than any other Ventilator of the same diameter, and is absolutely storm proof. The Ventilator, however, must necessarily have as great a capacity as the flue or opening upon which it is placed. For instance if a flue measures 8 x 12 inches inside diameter, nothing less than a 10-inch Ventilator should be used.

Where a chimney has more than one flue a separate ventilator for each is advisable. While two or more flues may be covered with a large base, yet a separate pipe should be made for each flue, making them independent of each other, and thereby preventing gas or smoke entering one from the other.

MERCHANT'S Combination Skylight "Star" Ventilator

Absolutely Storm-proof and
Effective.

This Ventilator and Skylight is constructed so as to embody all the essential principles required to make a strictly first-class and reliable Ventilator. Light being the important feature, the diameter of the circular glass top is one-fourth greater than the diameter of the shaft of the Ventilator. The area of light is therefore increased about 55 per cent.

In providing this additional area, and by the use of heavy glass securely set in a frame constructed in a rigid manner, glass breakage is reduced to a minimum and fully accommodates the diagonal rays of light penetrating through the additional surface of glass. The inside flange is constructed on a proportionately larger basis, thereby necessitating heavier materials when made up for **Skylight** use than for the regular Ventilator. Every allowance is made for condensation.

The metal top **Star Ventilator** has always **ventilated thoroughly**. The introduction of the Skylight feature sacrifices none of its ventilating qualities. The full capacity of ventilation is given without interference with the **light**.

THE ONLY DIFFERENCE between the **Combination Skylight "STAR" Ventilator** and the original metal-top "**STAR**" is in the glass top. The general construction is the same. The thickness of glass varies with the size of the Ventilator, and provision for shedding water, snow, etc., has been made.

Something of this sort has been needed in numerous cases and Architects and Builders will at once recognize in the new Ventilator a valuable improvement over the old system. **HYGIENIC PRINCIPLES** demand **light** as well as **air**, and the combination of perfect ventilation with plenty of light has thus been provided for, and the usual care in manufacture, superiority of material and general excellence of the original "**STAR**" **Ventilator** is assured.

PRICES ON APPLICATION.

B A S E S *

* * *

FOR

Chimney Ventilators.

There are two plans of attaching the "Star" Ventilator to a chimney, both of which are thoroughly practical. They are also economical and durable. These bases are of heavy galvanized sheet iron, and made to fit closely to the chimney, with either an inside or outside flange. The box attachments are securely riveted.

The base with outside flange is made to fit over the entire chimney, making it impossible for rain, snow or dampness to get on the inside of the flue. The inside flange is quite as effective.

Great care should be used in measurements, to insure good results.

Bases can be made to fit any roof or chimney, either square or oblong. The price of the base is *extra*, according to size and quantity.

We furnish dampers, if wanted, thereby regulating the draught.

Send for our "Star Ventilator" book.

On each Sheet of Merchant's High Grade Roofing Plates

There are letters stamped in the centre so you can plainly read the name of the brand and thickness of the plate.

That much you can *see*, but what you *can't see* is most important of all, it is that

Merchant's Best Plates . . .

are Coated by the Palm Oil Process,

which is the only way to make good roofing tin.

The duty of the roof is to keep out the rain. It will perform this duty if you use

MERCHANT'S PALM OIL HIGH GRADE ROOFING PLATES

and take care of it. Just how long a roof made of acid plates will last no one can say. Sometimes it will keep out the rain for three or four years, and sometimes it will leak inside of twelve months.

When you receive our plates you will find that each sheet is absolutely perfect. If you detect the slightest defect, we will replace the sheet at our expense.

High Grade Roofing Plates

"Merchant's Old Method"

This brand is accepted by the United States Government and the leading architects, as *the best terne plate produced.*

The Steel is of the finest and softest quality, and will stand the most severe tests.

The sheets are coated by the Palm Oil Process only.

Extra heavily coated, the metal evenly and uniformly distributed over the entire sheet.

Stamped with brand and thickness, resquared, and carefully assorted. **No Wasters.**

"Merchant's Roofing"

*is SUPERIOR to any Brand in the Market
except "MERCHANT'S OLD METHOD."*

POINTS OF MERIT:

Soft, very ductile Steel Body.

Made by the Palm Oil Process only.

Uniformly and very heavily coated, no beaded edges or irregularities.

Stamped with brand and thickness.

Each sheet resquared and perfect.

No Wasters.

"American Old Style"

is made by the Palm Oil Process, and is heavily coated.

The sheets are resquared, stamped with the brand and thickness, and finely assorted. **No Wasters.**

WE WILL NAME SPECIAL PRICES ON APPLICATION.

High Grade Roofing Plates

“Alaska” and “Camaret”

Strictly Palm Oil Process.

The most popular brands of extra coated High Grade Roofing Plates in the market. Always of uniform quality. Each sheet resquared, stamped with the brand and thickness and perfectly assorted. NO WASTERS.

THE “EMLYN” BRAND ROOFING PLATES

Having special arrangements with the former makers of this justly celebrated brand, we offer to the trade the

“EMLYN” Brand of Roofing Plates

Resquared. Each sheet stamped with the brand and thickness. This plate is made by the PALM OIL PROCESS exclusively, no Acid Flux being used. It is an excellent plate.

Good Grade Roofing Plates

“Hickory” Good Coating.

“Empire” Good Coating.

“Palm” Fair Coating.

The above three brands are resquared, stamped with the brand and thickness, and can be furnished of Prime or Waster quality.

We will name Special Prices on Application.

...Two Object Lessons...

The strength of a chain depends on its weakest link.

The life and value of a roofing plate depends on the thinnest coated part.

The value of **MERCHANT'S** roofing tin is in the process and uniformity of coating, and

The Entire Absence of Acid Flux.

OBJECT LESSON, NO. 1.

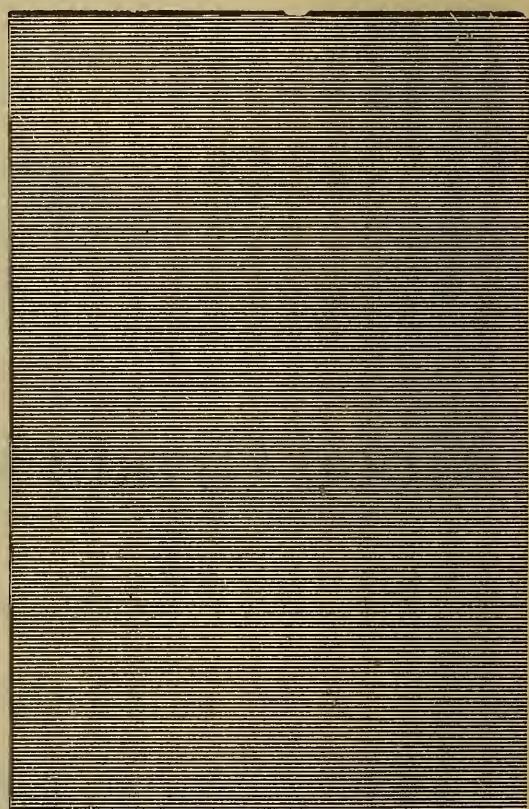

Showing Old Process.

Showing the unevenness of coating on a sheet of "old style" Roofing Tin made by a process claimed superior to sheets thoroughly coated in all parts alike.

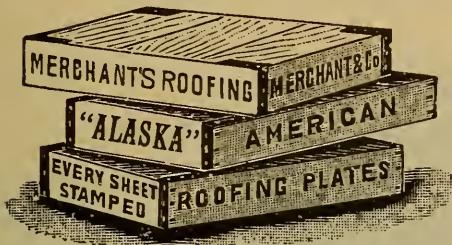

OBJECT LESSON, NO. 2.

Showing Our Process.

Showing the regular uniformity of coating on our High Grade roofing plates, made by the *Palm Oil Process*.

A Good Hard Rain and A Cheap Tin Roof

CAN teach more practical lessons in two hours, against buying hidden holes, than a barrel of literature could in twelve months

A HOLE

that attends strictly to business for sixty minutes can cause more expense than the roof would cost if covered with the finest tin in the world. *And these holes cannot be seen in the buying.*

Cheap Tin is Made by a Cheap, Quick Process,

using **VERY STRONG ACID**. This acid lies concealed in the very pores of the steel. It is active, disintegrating, destructive; forms rust, weakens resistance, bores holes—and here the trouble begins. This takes but a few months.

On SEPTEMBER 23, 1895...

The United States Government

broadly distributed specifications for Roofing Tin to be placed on the new GOVERNMENT PRINTING OFFICE, as follows:

"The United States desires only the best quality of dipped roofing plates, and samples showing surface imperfections, or irregularities in size, weight or shape will be rejected. Comparative tests will be made for weight, ductility, uniformity of plates, and thickness and quality of coating; all of which, as well as prices, will be considered in awarding the contract.

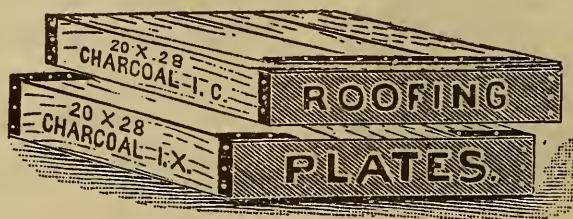

"Each bid must be accompanied by a full sample box, and must state the brand and average net weight per box of the roofing plates offered. No quantity less than a full box will be received as a sample and unsuccessful bidders can remove their samples as soon as contract is awarded."

Under these rigid specifications, examination and tests were made by a committee who awarded the contract to

Merchant & Co.,
INCORPORATED

Large stocks always carried in Philadelphia, Chicago, New York, Boston, Denver and Brooklyn.

Regular Grade Roofing Tin

To meet the demand for a regular grade of Roofing Plates, we offer you the following brands, which are of good working quality and nicely coated:

“ELSIE”

Dark, Oil Finish, Stamped.

“KISMET”

Dark, Oil Finish, Not Stamped.

“STANLEY”

Bright, Dry Finish, Stamped.

“ARCH”

Bright, Dry Finish, Not Stamped.

We can furnish the above plates of Prime, Unassorted and Waster quality ; light, medium or full weight, 20x28 and 14x20 size. The plates have given the very best satisfaction for a medium quality of tin.

CONTINUOUS ROOFING TIN.

“TANDEM”

—9 $\frac{1}{4}$ in Average—

From Seam to Seam

TANDEM

SIZES.

It is made in three sizes, 14", 20" and 28" wide, each strip of 20" and 28" contains one hundred square feet surface. 14" contains 50 square feet to each strip, and is packed two strips in each roll.

QUALITIES.

It is made in I. C. and I. X. thickness.

1st Quality Tandem “Old Style.”

2d “ “ Extra

3d “ “ Worcester Grade.

It is painted on one side, if desired, with pure Metallic Paint and Linseed Oil

PRICES ON APPLICATION

ROOFING PLATES IN ROLLS.

WE CAN FURNISH YOU

Weights	190 Lbs., 200 lbs., also IC full weight and IX full weight thickness.	Widths and Lengths	14" wide by 86' long 20" wide by 60' long 28" wide by 43 long
Quality	WASTER or PRIME; except HIGH GRADE which is of PRIME quality only.	Seams and Courses	CROSS LOCK seams soldered by hand EDGES perfectly straight.
Grade	LIGHT, MEDIUM, HEAVY or EXTRA HEAVILY COATED.	Painting	PAINTED on one or both sides, when so ordered.
Process and Finish	HIGH GRADE plates of PALM OIL process only. Others of dark oil finish, or bright, dry finish.		

We respectfully caution the trade to avoid quotations that do not definitely specify the weight and quality of the tin offered.

COST OF TIN ROOFING.

The following table shows the cost per square and per square foot of tin roofing, laid with 14 x 20 tin, with tin at any price from \$4 to \$10 per box. The first column contains the price per box of tin; the second column shows the cost of tin per square (100 square feet) of surface, and the third column shows the cost of tin per square foot of surface.

High Grade Bright Tins

THE DIFFERENCE between "Charcoal" and "Coke" Bright tin is in the COATING, STEEL and ASSORTMENT. Some so-called "Charcoal" plates are made of common steel, are thinly coated and poorly assorted ; while others have a dull, lusterless appearance.

YOU CANNOT MISTAKE our "Charcoal" Bright Plates for an inferior grade. The finish is like highly polished silver. The surface has no black spots, blisters or other defects. The steel is soft and ductile.

Our Brands are "Palma" "Florence" and "Minerva" made of the finest quality of soft steel, coated with pure refined Australian Tin, and assorted with the utmost care.

"PALMA," Extra Charcoal

Finest Finish and Lustre ; Extra Heavily Coated.

"FLORENCE," Charcoal

Strictly "Calland" or "Melyn" Grade ; High Finish, Heavily Coated.

"MINERVA"

Medium "Charcoal" Bright Finish, Well Coated.

The extreme care with which we assort our product insures not only extra fine Prime Plates but also an unusually good run of Wasters, which necessarily arise in the process of manufacture, and which we pack separately, and sell at a reduction in price.

ALL SIZES AND THICKNESSES.

Regular Grade Bright Tins

The following brands are of excellent working quality and very nicely coated :

"VIOLET" Allaway Grade, Medium Charcoal Finish.

"ROSE" Best Coke Finish.

ALL SIZES AND WEIGHTS. LOW PRICES.

Bright Tin Plate.

We have in stock the following Plates specially adapted to the manufacture of Furnace Pipe:

- IC and IX, 20 x 23, for 7 in. Pipe
- IC and IX, 20 x 26, for 8 in. Pipe
- IC and IX, 20 x 29 $\frac{1}{4}$, for 9 in. Pipe
- IC and IX, 20 x 32 $\frac{1}{2}$, for 10 in. Pipe
- IC and IX, 20 x 35 $\frac{3}{4}$, for 11 in. Pipe
- IC and IX, 20 x 38 $\frac{1}{2}$, for 12 in. Pipe

One Piece, Boiler Size, Bright Tin, Heavily Coated, Charcoal Finish.

1X 14 x 56
1X 14 x 60

2X 14 x 56
2X 14 x 60

PRIME AND WASTER QUALITY.

We carry a full stock in....

...METALS...

THE distribution of metals in Pigs, Ingots and Bars is one of the branches of our business. We are direct importers of Pig Tin, Antimony, &c. We are able at all times to sell at the closest market prices, and we would be glad to furnish you with *any* quantity desired. We import only the choicest brands of *Penang Straits Tin*.

We have large stocks constantly on hand at our warehouses in Philadelphia and New York.

Owing to the fluctuations of the market, the price for metals constantly changes. Please write us for our prices, and mention quantity and delivery wanted.

INGOT BRASS.

No. 1, Yellow Brass Ingot, Free from iron and suitable for finished work.

No. 2, Yellow Brass Ingot, A good reliable metal for work where it is not necessary to finish.

No. 1, Red Brass Ingot, For all work required to be finished, and where a high degree of efficiency is required.

No. 2, Red Brass Ingot, For all kinds of castings, where a cheaper grade of metal can be used and where no finish is required.

PRICES SUBJECT TO CHANGE WITHOUT NOTICE.

SOLDER.

Buying solder is largely a **matter of confidence**. No one can tell by sight whether solder is "½ and ½" or whether it is something else. "Straight Solder" looks exactly like solder that is not straight. A buyer is wholly at the mercy of the manufacturer. "Straight" solder is easy to make. No secret about it. Actual quality is what makes price. When a so-called "½ and ½" Solder is offered at a lower price than what we ask, the chances are that instead of being half tin and half lead, there is more lead than tin in it.

The point we wish to impress upon consumers is: When buying Merchant's Solders you are **certain of getting just what you pay for**. The brand on every bar represents the exact proportions of its mixture. We would no more permit any variation from our Standards than would the United States Government in the minting of its coin.

To prove deception in solder is widespread we have made analysis of nearly 50 different Brands of Solders and have found but 13 per cent. of them to be as represented. The other 87 per cent. varied widely from what they were supposed to be and sold for.

This means that purchasers of 87 per cent. of these Brands are paying for what they do not get. It means that these consumers are out of money and the manufacturers of the "STRAIGHT" Solders are placed at a disadvantage.

Has it ever occurred to you to find out if you are really getting what you are paying for? We will tell you upon receipt of samples sent to us, and without any expense TO YOU.

We Make the Following Brands

BRANDED

"Merchant & Co., Inc. Extra Fine,"	Only the very best selected and doubly refined materials used.	cts. per lb.
"Merchant & Co., Inc. Warranted ½ & ½"		"
"Merchant & Co., Inc. 90 to 100."		"
"Standard"		"
"Merchant & Co., Inc. Plumbers' Extra Wiping."	In cakes (made of the best selected materials, and guaranteed to give satisfaction.)	"
Double Refined Solder.		"
"½ and ½ Wire Solder."	No. 8, 10, 12, 14 and 16 Wire Gauge (for electrical and other purposes)	"

Any quality capping □ bars, $\frac{1}{4}$ cent per pound extra. Triangular △ bars $\frac{1}{4}$ cent per pound extra. Slab solder 4 x 6 in. x $\frac{1}{2}$ in. thick, no extra. Sizes of our solder boxes are 25, 50, 100, 125, 150, 200, 250, 300 and 500 pounds each. Wire solder is sold on reels of 100 lbs. Reels 25 cents each Returnable. Size of "Standard" "Double Refined" and "Warranted ½ and ½" about $1\frac{1}{4}$ pounds each; all others $1\frac{3}{4}$ pounds each.

MANUFACTURERS OF

ALL GRADES OF

Babbitt & Anti-Friction Metals*Genuine Babbitt Metal,**Iridium Anti-Friction Metal,*
(Registered 1888.)*“Superior” Babbitt Metal.*

Our Standard “A,” “B,” “C,” “D,” “E,” “F” Grades.

Special mixtures made to order, and prices quoted on receipt of samples; quality guaranteed equal to samples at all times.

HARD TYPE and LINOTYPE METALS,
 STEREOTYPE and ELECTROTYPE METALS,
 SPACE and QUAD METALS,
 OUR STANDARD GRADES.

Iridium Anti-Friction Metal

THIS is a special, extra hard, tough and durable alloy, possessing rare anti-frictional qualities, combined with great strength. It is especially adapted for very heavy pressure with high speed. For many purposes it is better than Genuine Babbitt Metal, and Brass Bearings, though costing less in price. It is also lighter in weight than either

“Superior” Babbitt Metal

SO MUCH so-called “Genuine” is offered (containing 10 per cents and more of lead) at a less price than the Genuine metal can be made for, that we brought out a special grade—the “Superior” which we offer to those wishing a good metal, but ONE not quite as expensive AS the Genuine.

“A” “B” “C” “D” “E” “F”**Genuine Babbitt Metal**

GUARANTEED by us to contain no lead. It is genuine, and made in the very best possible manner, only new pig tin, antimony and copper being used in its manufacture, and these of the best quality, combined in best proportions.

IN MAKING these grades our first consideration is quality, and we venture to say that our A, B, C, D, E and F metals are never excelled, and but very seldom equalled. By our largely increased business we have proof that our desire to supply our customers with extra fine Babbitt Metals has met with success.

WRITE FOR PRICES.

We Distribute

a greater quantity of Brass and Copper goods than any other Metal house in the United States; and to you this insures the bottom market rates, the promptest mill shipments, and a "Call" upon the largest stock of Brass and Copper products carried by any single manufacturer or jobber in the country.

...RULES to observe in ordering

BRASS and COPPER BRONZE METAL . . GERMAN SILVER . .

All Sheet Brass, Bronze Metal, German Silver, etc., will be measured by Brown & Sharpe's Gauge unless otherwise ordered. Mention thickness, width, length and temper. Sheet metal will be sent Annealed unless ordered of Hard or Spring temper.

Brass Wire will be measured by Brown & Sharpe's Gauge, and German Silver and Copper Wire by Brown & Sharpe's Gauge. Unless otherwise ordered, Brass Wire will be made Market Hard, or One Number Hard; and German Silver and Copper Wire will be sent annealed.

Unless otherwise ordered, the thickness of Brazed Tubing will be measured by Brown & Sharpe's Gauge, and that of Seamless Tubing by Stubs' Gauge; the sizes given for the diameter will be considered Outside Measurement; and all tubing will be sent Hard in temper and in lengths of twelve feet. It will be of great assistance in executing orders for Brass Tubing to know if they are to be used for bending; and in ordering Copper Tubes, it is well to state specifically whether they are to be bent, coiled, or flanged.

We advise the adoption of the Micrometer Caliper to determine the thickness of metal and the size of wire in decimal parts of an inch, and the abolition of all other gauges. This will prevent confusion and loss of time and money, as all other gauges are imperfect and unreliable.

Charges for making or altering Dies, Tools, etc., are made only to cover extra labor and expense on special material ordered; and ownership of such Dies, Tools, etc., is not conveyed to customers by reason of such charges.

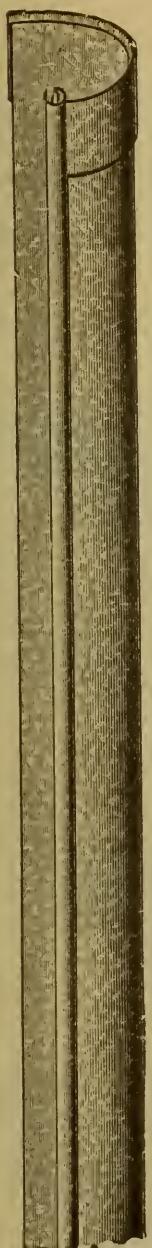

When material of any kind furnished by us is defective or not up to standard, we hold ourselves ready at all times to take it back or replace it; but under no circumstances will we allow damages or any claim for expenses involved in using our stock.

Merchant's Improved

Slip Joint Eave Trough.

NO CROSS SEAMS.

The Longest
Widest
Deepest

Trough in the
Market.

Each piece measures **full** 10 feet **after** being put together. Slip joints require no solder, are easily connected, are not affected by the expansion and contraction of the metal, and consequently are the best to use. Gives less trouble and better satisfaction. Bead on 3, 3½, 4, 4½ and 5 inch trough is ½ inch. On all the larger sizes the bead will be ⅜ or ¾ inch.

This Slip Joint Trough is positively more easily put together, and makes a better end connection than any other Slip Joint Trough in the market. The beads are strong and uniform.

PRICE LIST. 250 Feet to each Case.

Roof Gutters.

Made in 10 Foot Lengths, of No. 28 Gauge Galvanized Steel.

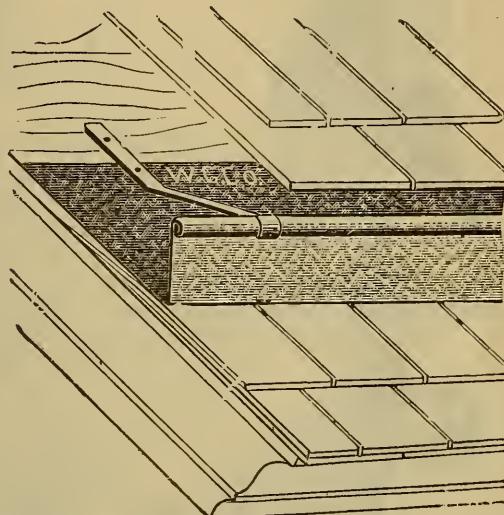

The following engravings show two styles, "A" and "B," Roof Gutters. The hangers are applied in such a manner as to leave no exposed nail or screw heads, (as cuts readily show); therefore, there can be no leaks from splitting or nail holes, as in the old-style way with wood fronts and wood brackets.

These Gutters are by far the best produced, and are sold at such prices that make them as cheap as those made of wood, lined with tin.

GALVANIZED CRESTING BLOCKS AND FINIALS.

Made of Galvanized Steel, to Fit
Two (2) Inch Ridge Roll.

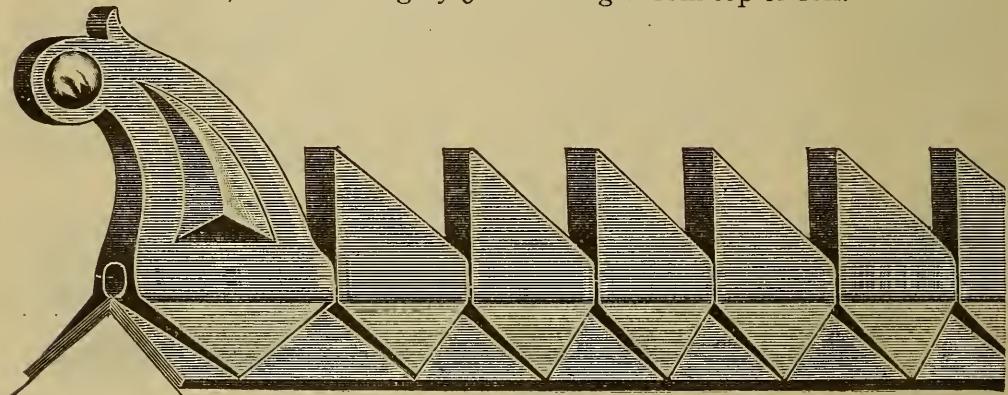

Can be Adjusted
To Make Various Designs

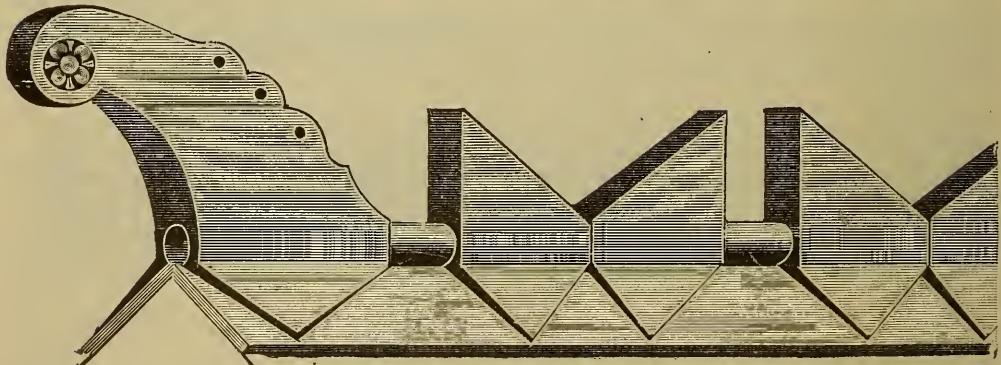

The above cresting block when applied to ridge roll will be found to meet the requirement for a cheap and ornamental ridge cresting. It is applied by slipping the block over roll, spacing as required, and nailed through lower flange of block with wire nail, securing ridge roll in place at same time.

Following cuts show blocks placed on ridging in two positions, each imparting a different appearance. Five adjustments can be made.

Size of block, 6 inches long by 5 inches high from top of roll.

B. B. GUTTER HANGERS.

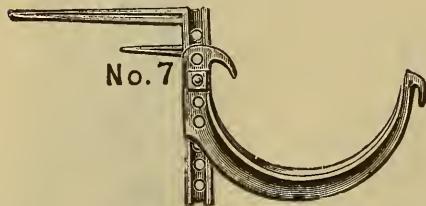

The most successful HANGER ever invented. More sold than all other kinds combined.

The only perfect open gutter hanger in existence.

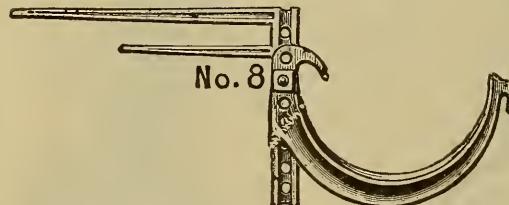

Patented October 13, 1879

Patented August 11, 1885

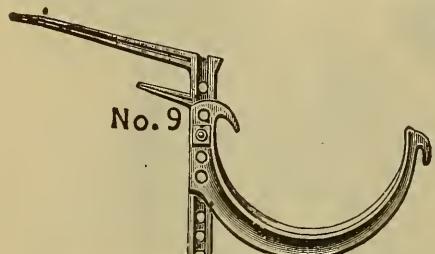

Patented July 6, 1886

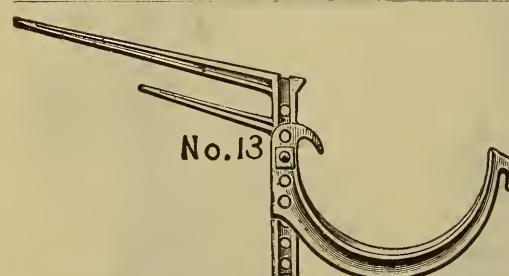

No. 7 is made to drive from 3 to 4 inches square in the cornice. The lower prong forms a brace for the upper, and makes it very strong and firm.

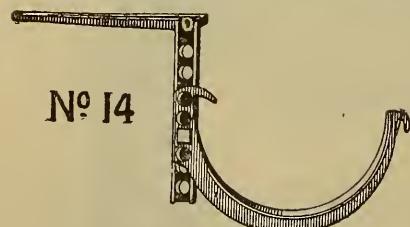

No. 8 is made to drive from 3 to 6 inches square in the cornice. This iron is intended for eaves where the shingles project far over the cornice.

No. 9 is to drive with the pitch of the roof. Same length as No. 7. Suited for narrow moulded cornice.

No. 13 Drives with the pitch of the roof. Same length as No. 8.

No. 14 is made to drive in brick or stone fronts.

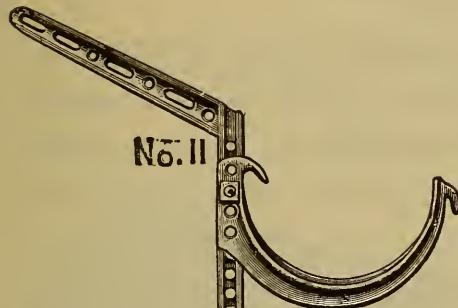

For prices see page 41.

Always state number wanted and whether black or galvanized.

**THESE HANGERS MAKE THE GUTTER EXCEEDINGLY
STRONG AND ORNAMENTAL.**

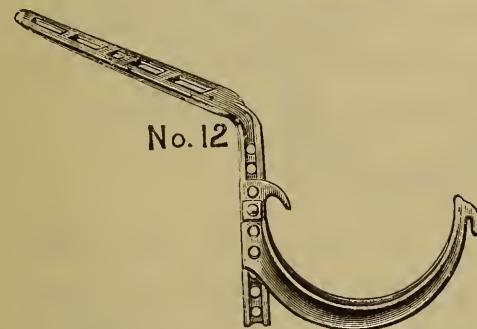

ARCHITECTS INDORSE THEM EVERYWHERE. THE ONLY HANGER TO LEAVE AN
OPEN, CLEAR, EXPANDING GUTTER.

NO TOOLS NEEDED—EASILY PUT UP.

No. 11 is especially adapted to barns, mills and factories, where the rafters are exposed. The shank is nailed to the side of rafter, assorting the 4, 6 $\frac{1}{4}$ and 9-inch shank to correspond with the amount of fall required. If more fall is desired, use the extension shank, to bolt on the end.

For Hinged, see No. 18.

No. 12 is made $\frac{1}{4}$ pitch to fasten under the shingles or slate, and are bent to suit the pitch. The holes on top of the shank are made beveling so that the nail can be driven at any point and enter the shank.

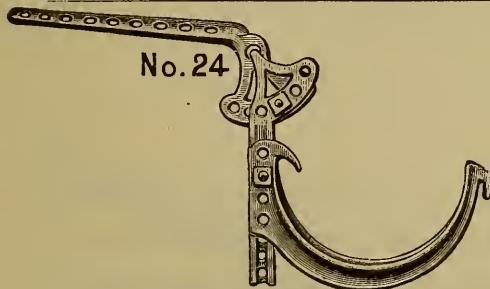

No. 15 is made for flat roofs.

No. 25 for steep roofs, half pitch.

No. 17 is Hinged for any pitch.

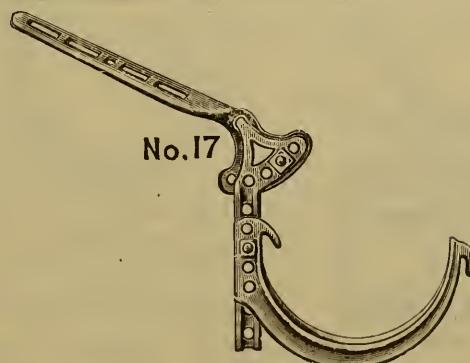

See No. 17 below.

No. 12 Shank also furnished extra heavy when so ordered, at double list.

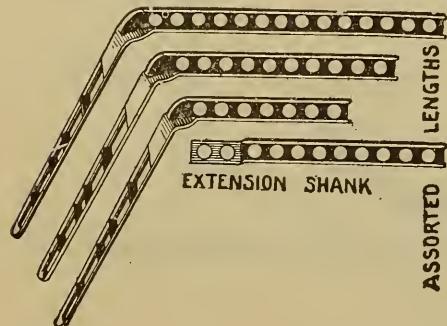

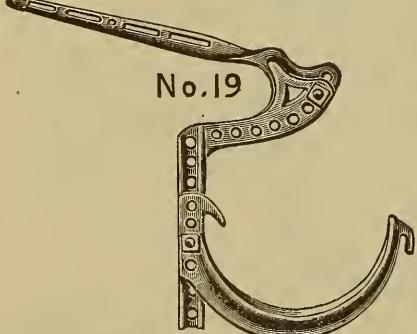

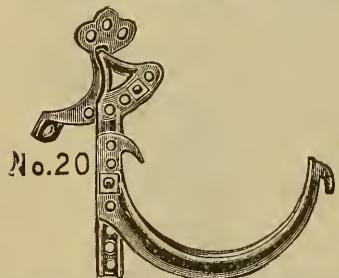

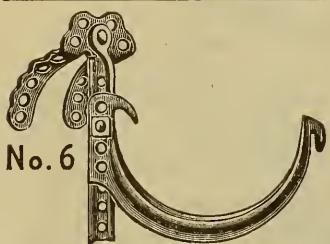

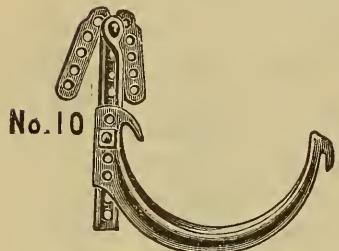

No. 24 is hinged to bolt on corrugated or other iron roofs, for awnings, mills and factories.

Note the Hinge and Circle, both adjust to every $\frac{1}{8}$ of an inch.

Always state number wanted and whether black or galvanized.

B. B.**GUTTER HANGERS—THE HANDIEST AND
BEST EVER INVENTED.****TRY THEM AND BE CONVINCED**

No 10 is made to nail against square box cornices, and is specially adapted to barns, mills and factories.

No 6 is made specially to nail against O. G mouldings. The two stays are made to fit in the cove and can be bent to suit any variation.

No 20 is hinged for any pitch, can be nailed or screwed to various shaped mouldings at any angle desired.

No. 19 is used either on top or under the shingles and suited for short projections of the shingles over the mouldings.

ASSORTED LENGTH.

All orders are filled with assorted length shanks unless otherwise ordered.

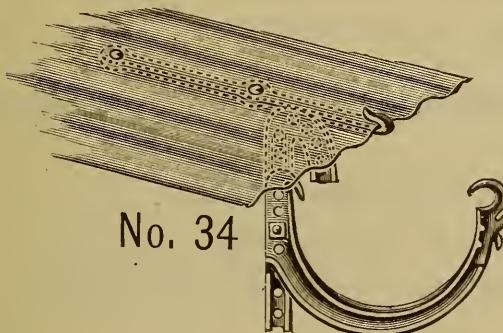

Always state number wanted and whether black or galvanized.

B. B.

New Hinged Shanks and Circles.

PATENT APPLIED FOR.

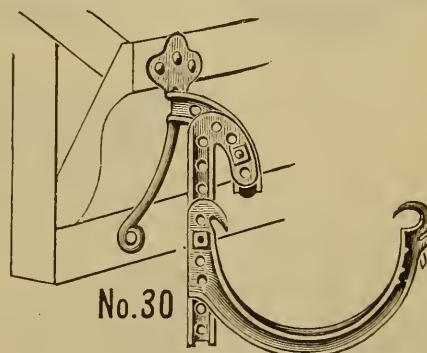

This shank combines great strength and variation; also allows the stems to hang close up to the cornice and the circle close to the shingles.

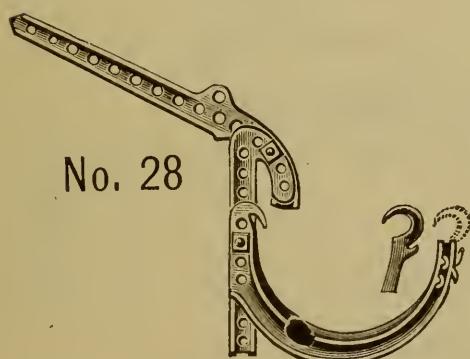

No. 34

No. 34 is clamped direct to the metal roof, needing only one bolt through the iron. A valuable article for awnings and corrugated roofs.

No. 30 will span over various-shaped mouldings and is easily bent larger or smaller before nailing to the eave.

No. 30

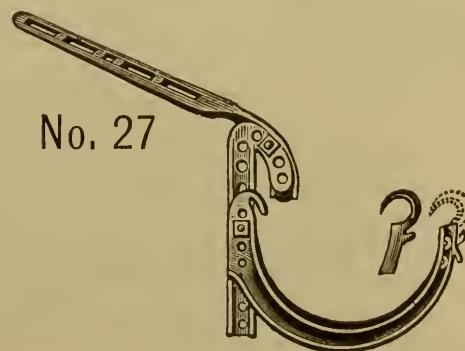

No. 28

No. 28 can be nailed to exposed rafter in any desired angle.

No. 27 is fastened under the shingles, the hinge and circle both adjust to every $\frac{1}{8}$ inch.

This shank also furnished extra heavy when so ordered, at double list.

No. 27

Always state number wanted and whether black or galvanized.

Patented and manufactured in the United States for fire proof construction.

One Hundred Medals Have Been Awarded.**None Better or more Extensively Used.**

Sizes, 15 x 96 and 30 x 96.

Put up in bundles of 100 square feet.

Price 26 cents per square yard.

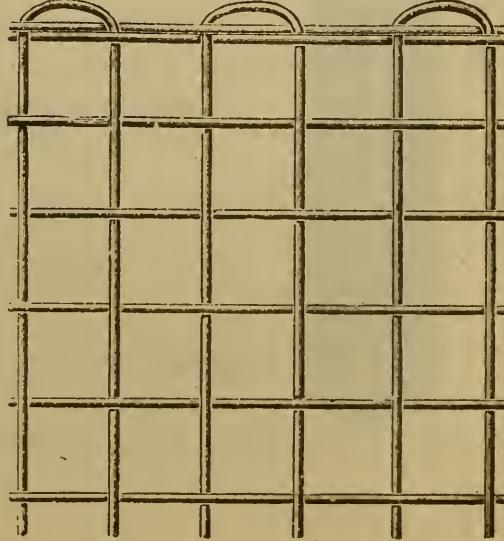

WIRE LATHING.

This wire cloth is woven of meshes $\frac{3}{8}$ by $\frac{3}{8}$ and of No. 19 gauge wire, and is applied directly in place by securing the wire cloth to wooden furring strips by staples.

The length of the rolls is 100 lineal feet and the widths are from 12 to 48 inches.

We recommend this as thoroughly Fire-proof.

This wire lathing for heater flues work cannot be excelled. Widths generally used 12, 14, 16, and 18 inch.

Ritchie's Patent Spiral Lock-Seam Pipe.

For Plumbers' Ventilator Pipes, Conductors or Water Spouts,

And for all classes of work where lightness and strength are desirable, Spiral Pipe is superior to any other. It is rounder, stiffer, and more easily fitted than any other, and therefore unequalled for use in ventilation by plumbers and others.

Each 10 ft. length is a single, perfect piece, not short lengths soldered together, for soldered pipes easily break apart.

One end of each length is enlarged so that the coupled pipe is, throughout, of even size inside. It is galvanized after it is made.

DISCOUNT.....per cent.

These Elbows can be adjusted to any angle between a straight line and a right angle.

# The Uncle Sam Damper.

Smoke-Pipe Damper.

Heater-Pipe Damper.

This Damper eclipses anything heretofore placed on the market. The handle is enameled wood, will not heat, rigidly clamped and cannot come off. The spring is not affected by heat, and will always remain the same.

The stem is malleable iron, pointed, and is easily driven through the pipe. The Damper Plate is made of cold-rolled pickled steel, corrugated to stiffen it and prevent warping.

We call special attention to lightness and strength of these Dampers and their desirability for Heater Pipes. The nuisance of buying Damper clips and making your own dampers is avoided, and you have a better article ready for use at less cost.

**The difference in weight pays the freight.**

| Lustre, " "                      | " . . . . . | "       |

Planished Steel is a sheet of mild low-carbon pliable steel, with a polished surface and other desirable essentials of the **Genuine Russia Sheet Iron**, tenacity of scale and ability to retain its color, under long-wearing heats, and to withstand corrosion in moist and saline atmosphere as well as the imported.

Planished Steel is so free from stiffness or springiness that for round work the forming rolls may be run very loosely. If screwed down as tightly as ordinarily for working iron, there is liability of crimping the work slightly.

# U. S. POLISHED SHEET STEEL

..... FOR .....

**STOVE PIPES.**                    **STOVE DRUMS.**  
 and all fine Sheet Iron Work.

---

### **STANDARD SIZES AND GAUGES OF U. S. POLISHED SHEET STEEL.**

U. S. Gauge Nos. 18, 20, 22, 24, 26, 27, 28. Widths, 24" and 28". Lengths, 60", and 101".

Put up in bundles of about 150 lbs. each and in sheet iron cases of about 300 lbs. each, net.

No charge for cases.

No shipment less than 900 lbs.

We deliver f. o. b. cars at Demmler, Pa. Freights from Demmler are the same as from Pittsburgh.

The consignee becomes the owner of the steel when we have loaded it on the cars. To secure the lowest freight rates we ship at owner's risk unless ordered by the buyer to contract at a higher rate of freight under which the Railroad Company will assume all risk in transportation.

All orders for other than standard sizes must be for not less than 5000 lbs. of each size and guage.

---

## Genuine Charcoal . . . . .

## Bloom Galvanized Iron, (not Steel)

## Genuine Charcoal Bloom Black Iron Sheets

For certain classes of work where Galvanized sheets are subjected to a continuous high temperature, we recommend the use of Genuine Charcoal Bloom Iron.

We can promptly furnish Genuine Charcoal Bloom Iron, (not steel) either Black or Galvanized, in all the regular sizes and guages, and make special sizes to order.

---

*We Solicit Inquiries or Orders.*

## Pressed Corrugated Sheets.

For Roofing, Siding, Ceiling, Doors, Shutters, Awnings,  
Grain Elevators, Mills and Factories, Etc.

### Black, Painted and Galvanized.

---

Corrugated Sheeting is the strongest known form of sheet metal, and imparts material strength to the structure to which it is attached, by its lineal rigidity.

Good wooden shingles are a thing of the past, and they afford no protection whatever in case of fire. Slate Roofing requires a costly structure to support its heavy weight. Heat, freezing, or settling of the building will cause slate to break, and repairs are attended with much difficulty and expense, while **Metal Covering** permits the use of light frame work, thus cheapening the cost of structures without lessening their utility, and should repairs become necessary, they are easily made.

It has the following qualities, essential to all covering material: It is fire, water and wind proof; it is lightning proof; it is cheap, light and durable; it allows for the use of a light frame, being a support in itself. A building covered with it makes a handsome appearance.

It is only necessary to suggest the advantage of using this material for protection against fire. Insurance companies demonstrated its value by their ratings.

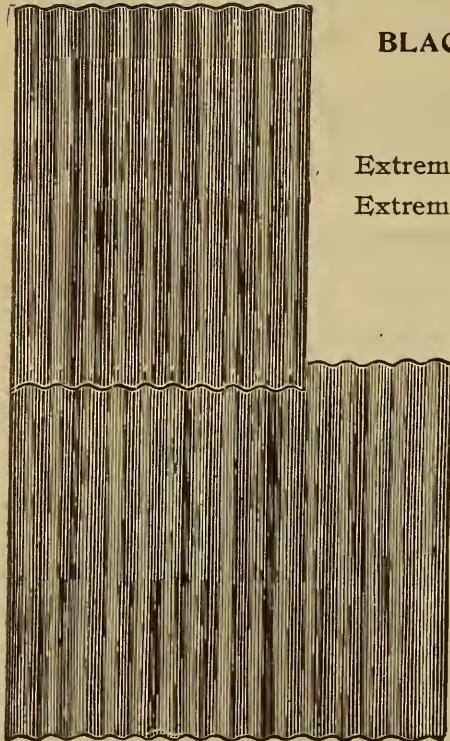

We make estimates, when desired, on spaces to be covered. In such cases we must have detailed dimensions.

---

Approximate weight per square of Corrugated Sheets, adopted by  
Association of Iron and Steel Roofers.

# CORRUGATED STEEL OR IRON.

## BLACK, PAINTED AND GALVANIZED.

Standard  $2\frac{1}{2}$  inch Corrugations.

|                                    |         |
|------------------------------------|---------|
| Extreme length, Nos. 18 to 28..... | 120 in. |
| Extreme length, No. 16.....        | 96 in.  |

## REGULAR LENGTHS.

Galvanized ..... 5 5 $\frac{1}{2}$  6 6 $\frac{1}{2}$  7 8 9 and 10 ft.

Black and Painted..... 5 6 7 8 9 and 10 "

Extreme width ..... 27 $\frac{1}{2}$  in.

Covering width ..... 25 "

We can supply all the usual Corrugations. Eight feet lengths are furnished, unless otherwise specified.

In quoting prices we make no allowance for laps.

SHOWING WHERE TO NAIL LAP.

The usual custom is to nail through the top of the Corrugations, but this frequently indents the sheets; we recommend nailing in the manner shown above.

## DISTANCES BETWEEN ROOF SUPPORTS.

No. 16 Gauge, purloins can be 7 to 9 feet apart; No. 18, 6 to 7 feet apart; Nos. 20 and 22, 4 to 5 feet apart; No. 24, 2 to 4 feet apart; lighter gauges 1 to 2 feet apart.

Sheathing may be dispensed with when Nos. 16 to 22, or even 24, is used.

An end lap of one inch and one corrugation side lap, is sufficient when Corrugated Iron is used for Siding, and cross supports may be placed a little farther apart.

When Corrugated Iron is used for Roofing, the most satisfactory results are obtained if sides are lapped two corrugations, and end laps not less than three to six inches.

## CURVED CORRUGATED SHEETS.

For Roofs, Ceilings, Iron Bridge Work, Wharf Boat Roofs, Ventilator Roofs, Dormer Windows, Arches, Awnings, etc.

*We can also furnish Corrugated Elevator Siding Plates.*

# LEAD WASHERS

Used when putting on ROOFING and SIDING  
Corrugated or V-crimped as shown  
in the cut below, will

## PREVENT LEAKS

Full Size.

No. 8.  
( $\frac{5}{8}$  in. hole.)

Full Size.

No. 12.  
( $\frac{3}{8}$  in. hole.)

No Corrugated or V-crimped Roofing ought to be laid without using these washers.

They make an **absolutely water-tight joint** on any surface, whether concave, convex or flat; they also **prevent rust** below the nail head, and the head from cutting into the sheet, thus making a more durable job.

Put up in boxes containing 100 pounds each.

One pound contains 325 Washers.

One pound will put on 2 to 3 squares.

Hole in the No. 8 Washer is  $\frac{5}{8}$  of an inch in diameter.

Hole in the No. 12 Washer is  $\frac{3}{8}$  of an inch in diameter.

Price per pound . . . . . 25 cts., net.

# Corrugated and Crimped Sheets.

CORRUGATED IN CENTRE WITH BLANK SPACE ON TWO SIDES.

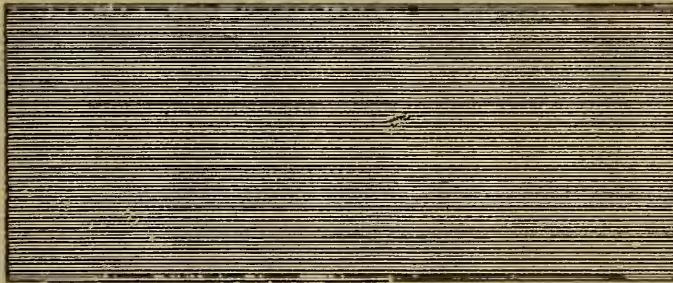

We corrugate Copper and other Sheet Metals for covering drain boards in hotels and private houses, using corrugations one-half inch from center to center.

This corrugation takes up one inch of material to the foot.

Sheets longer than five feet cannot be corrugated the long way of sheet.

Always state, when ordering, whether corrugations are to run long or short way of sheet.

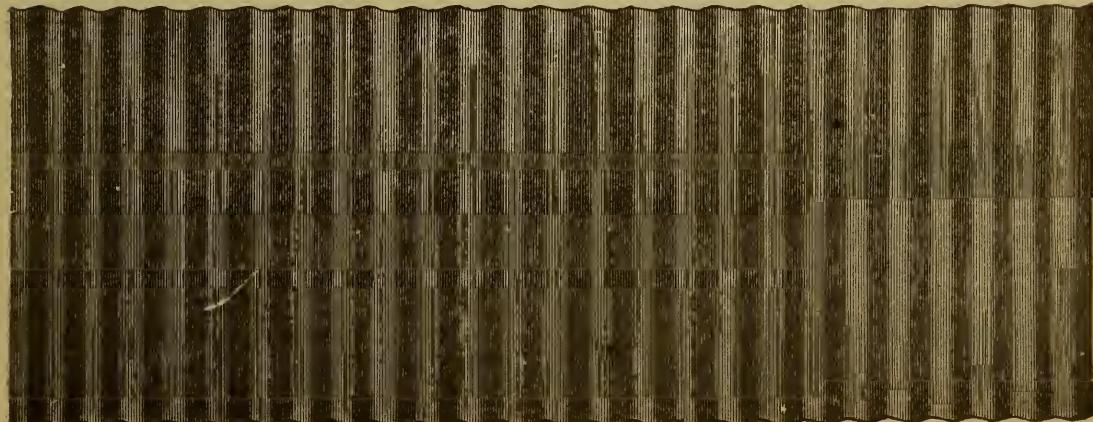

|                                                               |          |

## COPPERS.

Always state whether weight wanted is per pair or each and if clinched or riveted handles.

# METAL SIDING.

## WEATHER BOARD SIDING.

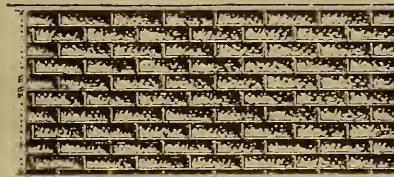

Painted and Galvanized. In 5, 6, 7, 8, 9, 10 Feet Lengths.

### BEADED IRON SIDING.

Painted. In 5, 6, 7, 8, 9, 10 Feet Lengths.

### ROCK FACE BRICK SIDING.

Painted and Galvanized.

### STEEL PRESSED BRICK—Similar in appearance to Philadelphia Pressed Brick.

PAINTED AND GALVANIZED.

### RULES OF MEASUREMENT.

In selling SHEET METAL ROOFING and SIDING, on which all quotations are based.

#### A SQUARE.

Consists of 100 square feet, calculated by the following rules.

#### CORRUGATED SHEETS.

Full length and full width from edge to edge, after being corrugated is calculated.

#### V-CRIMPED, STANDING SEAM, AND WEATHER BOARD.

Full length of sheets and actual covering width is calculated.

#### ROLL ROOFING.

The actual covering width, (allowing 2½ inches for seaming) and the full length of rolls after locking, is calculated.

#### NAILS, WOOD STRIPS AND PAINT

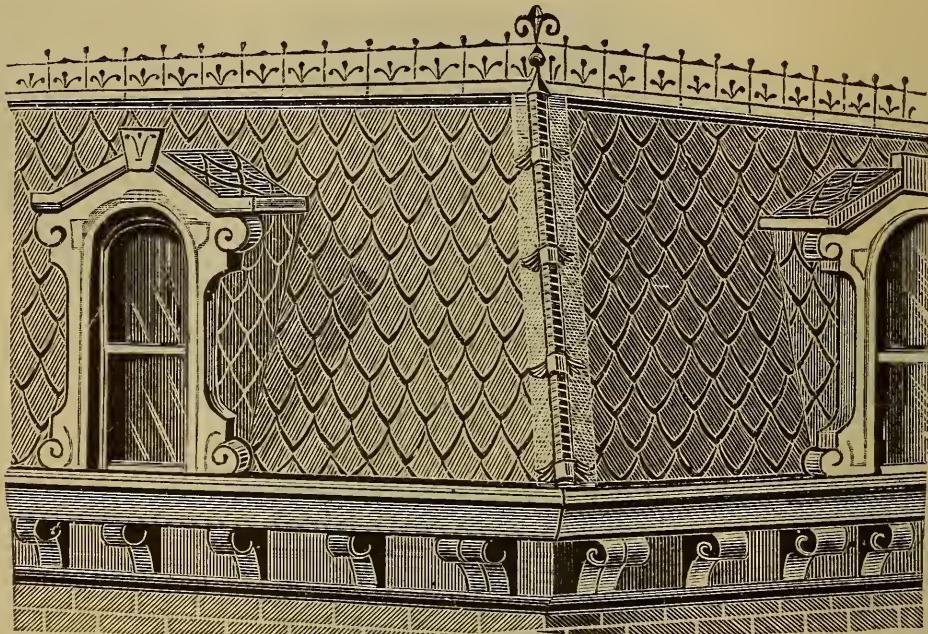

Are sold by the pound, lineal foot, gallon or at a fixed extra price per square of roofing, and are not included in the price quoted in the sheet iron or steel but are charged as separate items when furnished.

#### RIDGE CAP, CORRUGATED WOOD STRIPS AND CORNER BOARDS

Are sold by the lineal foot, and charged as separate items when furnished, and are not included in prices quoted on sheets or roofing.

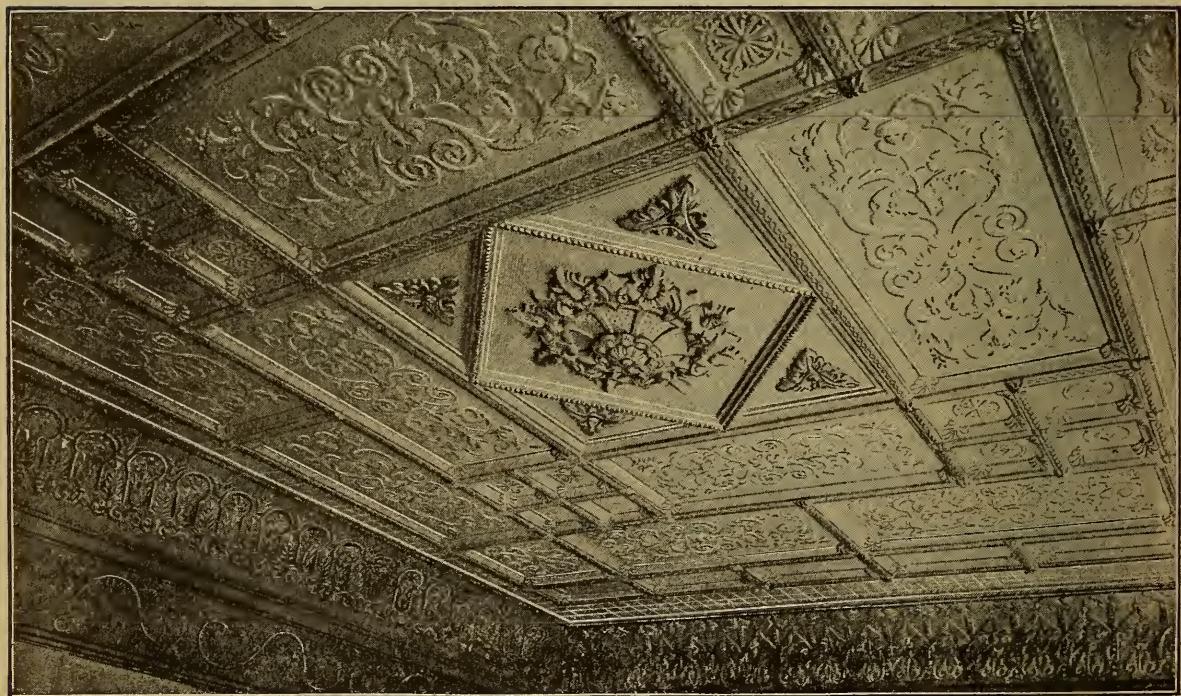

# METAL SHINGLES . . .

FOR ROOFING AND SIDING.

*Above Mansard covered with Gothic Tiles.*

## Stamped Metal Ceiling Plates.

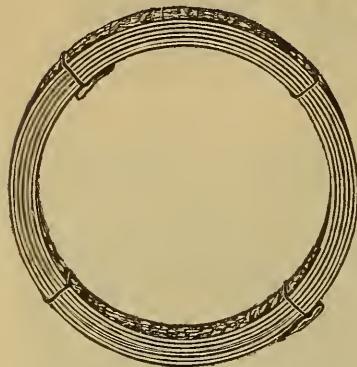

*Sagnendorph's Patent Sectional Metal Ceiling and Side Wall Finish.*

# W. C. BELL'S

NEW PATENT DOUBLE ACTING

## Roofing Edger and Reel

For Standing Lock Tin Roofing

Patented Dec. 6, 1892.

### TWO STRIPS AT ONCE

The edger is **designed**, without alteration, for **single strips**, and the machine can be used in the ordinary way as before

### TWO SIZES ARE MADE FOR 20-INCH TIN AS FOLLOWS.

No. 1 Narrow Gauge, with Reel, turns 1 in. x 1¼ in. . . . Price \$40., Dis. 10 Per cent.  
No. 2 Wide Gauge, with Reel, turns 1¼ in. x 1½ in. . . . Price \$40., Dis. 10 Per cent.

Price of either the above sizes, without reel, . . . . \$35. Discount 10 per cent.

Price of LAST YEAR'S EDGER, (Nos. 1 and 2.) . . . . \$30. each, discount 10 per cent.  
Price of Last Year's Edger WITH REEL, . . . . \$35. discount 10 per cent.

**REELS FURNISHED FOR OLD MACHINES ON APPLICATION**

**WHEN ORDERING PLEASE STATE THE GAUGE.**

### Oxide of Iron Roofing Paint. (Ground in oil.)

Colors,—Metallic Brown.

This Paint requires only about half as much oil to mix it for use as dry paint requires.

**PRICES.**

|                                  |         |

# "Pratt" Cross Lock Seamer.

This Machine is for locking sheets of tin together, and forming them into rolls of any desired length. Each Machine is furnished with a table "F." The Squeezing Rolls "A" are set diagonally so that but a small portion of the seam "D" is between the rolls at one time, making the machine easy to operate.

The 24" Fly Wheel "G" draws the sheets of tin "E" through the rolls and winds them on the Drum "C." The tension of the rolls is governed by the Set Screws "D." The Drum Shaft and Fly Wheel are strongly connected at "H."

The sheets of tin are first edged, and then placed consecutively on the table, so that each one draws the next during the operation of seaming. The table capacity is 28 sheets.

The operation is easy and perfectly noiseless. Six boxes of tin per hour can readily be put together on this machine with less labor than would be required in putting one box together with a mallet. We fully guarantee every machine to be as represented.

## O. W. BURRITT'S PATENT DOUBLE SEAMERS.

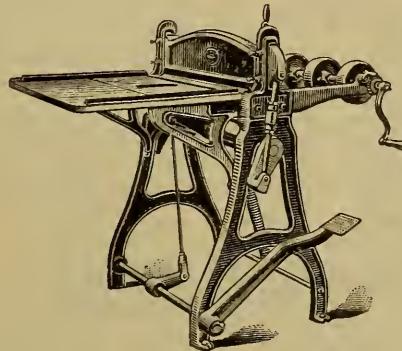

Common Gauge, follow 1 and  $1\frac{1}{4}$  Tongs. Lock  $\frac{3}{4}$  high.  
Wide Gauge, follow  $1\frac{1}{4}$  and  $1\frac{1}{2}$  Tongs. Lock, 1 in. high.

*Price per Set, Two Pair, Wide Guage, \$30; Common Gauge, \$30.*

**SEND FOR DISCOUNT.**

## NIAGARA CROSS LOCK SEAMER.

THIS Machine is intended for fastening together sheets of tin and rolling them up in strips, ready to lay on the roof. It is simple, rapid, easy to operate, and saves time and labor.

All parts of this Seamer are constructed with a view to strength and rigidness. The pressing bar is operated by a powerful toggle movement connected with foot treadle, and the seam produced at one depression of the treadle is perfectly tight and uniform the entire length.

Side guages are provided on the drop table, and the sheet is held in proper position between the bar and bed by means of hinged fingers fastened to the pressing bar. These fingers move out of the way automatically when the bar is being depressed, and they drop down again when the bar goes up.

An eccentric attachment is applied to the pressing bar to raise the same sufficiently to allow the folded edge of the first sheet to pass through.

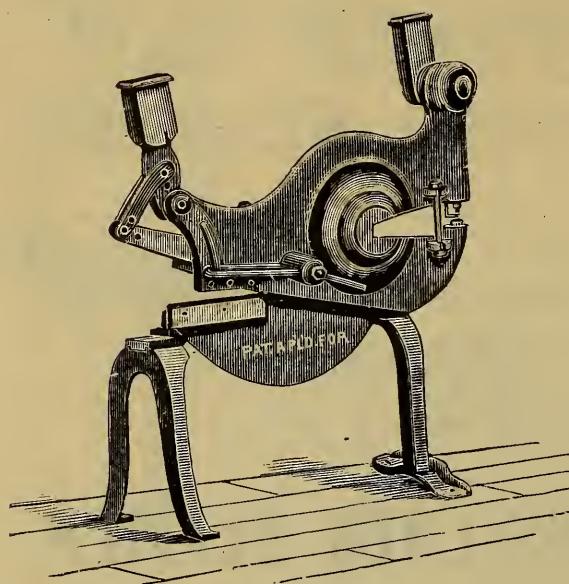

The reel in the rear of the machine is controlled by a ratchet and pawl, and the rolls of seamed tin can be removed without difficulty.

The drop table is hinged to the frame and supported by brackets. It can be dropped down easily so as to occupy the least possible space.

Working length, 28 inches.

**Price, with Reel and Drop Table, \$50.**

**WRITE FOR DISCOUNT.**

# IMPROVED, PATENTED COMBINED PUNCH AND SHEAR . . .

For sheet-iron workers, etc.

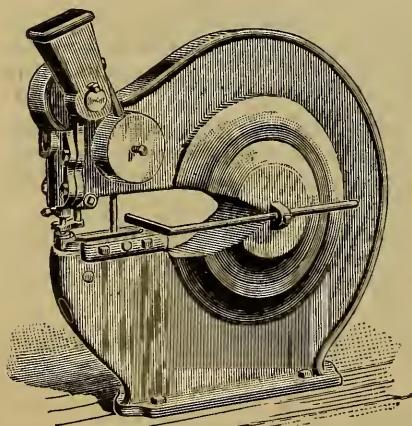

With the Punch are furnished three sets of punches and dies, back gauge, improved side pin gauge for punching holes of equal distance apart without marking off, and strengthening bolts for deep throat Punches.

| No.  | Throat. | Capacity.         | Blade.  | To Cut. | Bars.       | Round | Weight. | Price.   |

With strengthening bolts the No. 5 will punch 3/8 through 3/8 instead of 5-16 through 5-16. No. 8, 1/2 through 3/8. No. 9, 3/8 through 3/8. No. 9 A, 1/2 through 3/8.

No. 9 made heavier to punch 3/8 through 3/8 and cut No. 8 instead of No. 10, \$100.

No. 11 will be furnished with an extra top blade for trimming 3/8 plates. Nos. 2 and 3 with strengthening bolt on Shear for cutting heavier bars, \$1.00 extra. State size of punches and dies desired.

## GENERAL PURPOSE LEVER PUNCHES

Made for Power if Desired.

Especially adapted to Sheet-iron Workers, Boilermakers, Railingmakers, Carriage Shops, Wagon Shops, etc.

| Throat. | Capacity.       | Weight | Price.  |
|---------|-----------------|--------|---------|
| 4-inch  | 3/8 in 1/4 inch | 140    | \$30 00 |
| 6-inch  | 1/2 in 3/8 inch | 275    | 38 50   |
| 10-inch | 3/8 in 3/8 inch | 375    | 42 50   |
| 9-inch  | 3/8 in 1/4 inch | 225    | 37 50   |
| 12-inch | 1/2 in 3/8 inch | 500    | 50 00   |
| 14-inch | 3/8 in 1/4 inch | 425    | 45 00   |
| 15-inch | 1/2 in 3/8 inch | 700    | 60 00   |
| 18-inch | 3/8 in 1/4 inch | 650    | 55 00   |

Six and 9-inch are fitted for bench or post. Same on 4 and 10-inch, \$1.00 extra. Are extra heavy and guaranteed not to break. When ordering state the sizes of punches and dies.

## Buffalo Snips.

*With Straight Jaws and yet Adapted to Cutting Out Holes, Irregular Shapes, Scrolls, Etc.*

THE INNER faces of the jaws are shaped in such manner that the material can pass freely when the operator is cutting curves and irregular shapes. When cutting in the other direction, the lower jaw will allow the material to pass.

The above advantages are gained **without weakening the jaws** in the least. The **Buffalo Snips** are as strong and well adapted for regular work as the ordinary straight snips.

Any tinsmith will readily see that these are the cheapest Snips in the end, as they combine the advantages of Circle Snips with those of straight Snips.

The **Buffalo Snips** are finished in first-class manner, being forged out of the solid bar, with steel-laid jaws properly tempered.

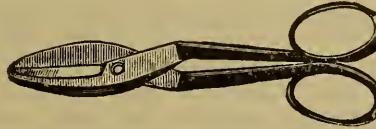

|                                              |              |

## Niagara Snips or Hand Shears.

FORGED.

There are no better snips in the market than the "NIAGARA." The utmost care is taken in their manufacture. The blades are of the best steel; the handles are forged from the bar and will not break.

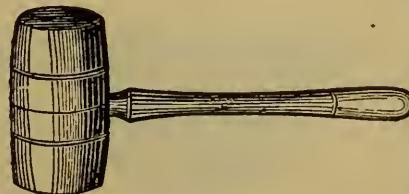

|                                  | Nos. 6½ | 7      | 8      | 9      | 10     |         |
|----------------------------------|---------|--------|--------|--------|--------|---------|
| Will cut . . . . .               | 4½      | 4      | 3½     | 3      | 2½     | inches. |
| Straight Snips . . . . per pair, | \$3 00  | \$2 50 | \$2 00 | \$1 50 | \$1 40 |         |
| Circular Snips . . . .           | 4 25    | 3 50   | 3 00   | 2 50   | 2 25   |         |
| Discount . . . . .               |         |        |        |        |        |         |

The terms "Right and Left-hand Snips" are frequently misunderstood. Both kinds are used in the right hand. When held in the right hand, "Right-hand Snips" have the lower blade on the right side, and "Left-hand Snips" have it on the left side of the cutting line. The above cut shows "Left hand Snips" and these are always sent, unless ordered otherwise. We also supply snips for left-handed workmen at an extra charge of 50 cents net, per pair.

## FIRE POTS.

**ABSOLUTELY THE BEST FIRE POTS MADE.**

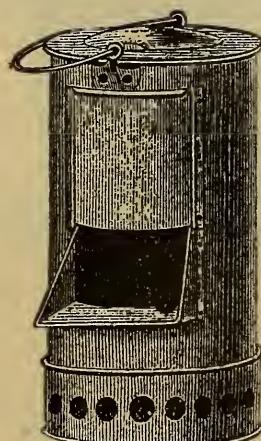

**NOTE THIS.**—Particular attention is called to the fact that with a No. 1 Fire Pot a kettle of solder or lead can be kept hot enough to wipe joints, and at the same time, without removing kettle from the fire, there is sufficient room and heat to keep soldering irons ready for use. In fact the No. 1 Fire Pot will heat all the metal and soldering coppers two men can use at the same time. **There is No Other Fire Pot Made that can do this.** Bear this in mind when purchasing a furnace.

No. 1. Price Complete . . . . . \$6.00

The cut will give you an idea of what "Our Special" is. In a word it is a No. 1 boiled down or concentrated, and is the best Fire Pot for its size that can be made.

"Special." Price . . . . . \$4.50

*Discount.....per cent.*

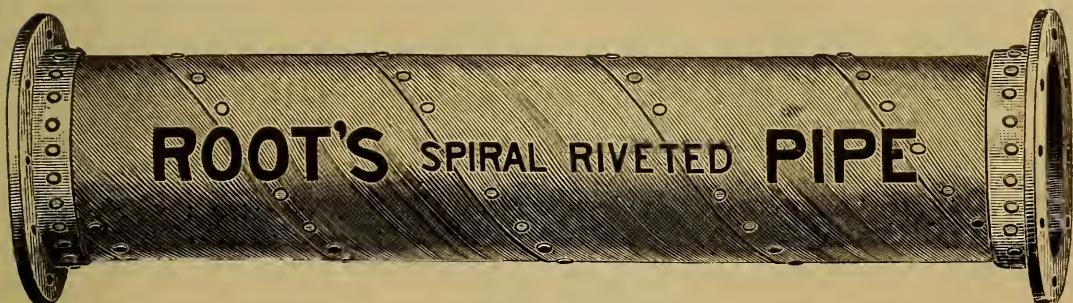

## SHEET-IRON FIRE POTS.

## SUGGESTIONS TO TINNERS

Relating to Proper Sizes for

# Eave Trough and Conductor Pipes.

The rule for determining the relative sizes of Eave Troughs and Conductor Pipes requires a series of complex calculations, varying according to areas of roof and length of Trough. While the rule gives the theoretical results, it is better in practice to keep on the safe side, owing to the liability of the flow of water being obstructed by leaves and other accumulations, and of freezing during the winter season. We submit the subjoined table as a guide.

### RELATIVE SIZES OF EAVE TROUGH AND CONDUCTOR PIPE.

| 3½ inch Trough, up to 12 feet long ; use 2 inch Conductor Pipe. |   |          |   |   |     |   |   |
|-----------------------------------------------------------------|---|----------|---|---|-----|---|---|
| 3½ "                                                            | " | 12 to 25 | " | " | 3 " | " | " |
| 4 "                                                             | " | 25 to 35 | " | " | 3 " | " | " |
| 5 "                                                             | " | 35 to 45 | " | " | 4 " | " | " |
| 6 "                                                             | " | 45 to 55 | " | " | 5 " | " | " |
| 7 "                                                             | " | 55 to 65 | " | " | 6 " | " | " |
| 8 "                                                             | " | 65 to 75 | " | " | 6 " | " | " |

These dimensions can be varied in proportion to the area of roof. When a Trough is exposed to the North the intervals between Conductors should be reduced in length.

### COMPARATIVE AREAS OF CONDUCTORS BASED ON FIVE INCH DIAMETER.

|                                                       |
|-------------------------------------------------------|
| 5 x 5 inch Square Conductor Pipe ; area 25 inches.    |
| 5 x 5 inch Octogan " " " 20½ "                        |
| 5 inch Plain Round " " " 19²/₃ "                      |
| 5 inch Corrugated Conductor Pipe ; area 16³/₄ inches. |

**Eave Trough Hangers** should be placed from 3 feet to 3½ feet apart.

**Conductor Fasteners** should be placed from 3 to 6 feet apart, proportionate to the sizes of Conductor.
